Sample Talking Points:

Let's Build On What's Working, Not Introduce New Costs and Complications By Creating New Government-Controlled Health Insurance Systems

Public Option

- The public option could come with unaffordable new costs for working Americans.
 - The public option could harm the existing health care insurance system and cause premium increases for currently insured Americans, force a reduction in coverage options, and reduce access to care for seniors and low-income families. (Congressional Budget Office, 4/21)
 - The public option could have significant impacts on America's future fiscal condition and either increase the federal debt or require higher taxes on American families. (<u>Lanhee J.</u> <u>Chen, Ph.D., Tom Church and Daniel L. Heil</u>, 2/21)
 - In fact, the public option could be even more expensive for working families than originally projected.
 - A public option could add \$700 billion to the federal deficit in its first 10 years and would become the third most expensive government program behind Medicare and Social Security, both of which are already at risk for the seniors that rely on them. (Lanhee J. Chen, Ph.D., Tom Church and Daniel L. Heil, 1/24/20)
 - Research found that under the public option the average American family could eventually see their payroll taxes increase by more than \$2,500 a year and 10-year deficits could increase by \$800 billion due to the public health crisis. (Lanhee J. Chen, Ph.D., Tom Church and Daniel L. Heil, 10/20/20)
 - Over 30 years, a public option could lead to a new 4.8 percent payroll tax or marginal tax rate increases for most American families to finance the new program. (<u>Lanhee J.</u> <u>Chen, Ph.D., Tom Church and Daniel L. Heil,</u> 1/24/20)
- Creating the public option could harm patients' access to the affordable, high-quality health care they need and deserve including among vulnerable rural and minority communities.
 - The public option could put a \$774 billion financial strain on hospitals over a 10-year period, potentially forcing hospitals to reduce staff and eliminate services as they operate on a negative profit margin due to lower reimbursement rates. (KNG Health Consulting, 3/12/19)
 - The closure of hospitals could decrease access to care in rural communities. A public option could put one in four rural hospitals at an increased risk of financial distress and in many of these communities, these hospitals are the only source of health care. (FTI Consulting, 7/14/21)

- Reductions in private payment rates may make it more difficult for rural hospitals to hire additional physicians or other health care professionals in areas already facing shortages of such workers. (Urban Institute, 3/21)
- The public option could force health care providers to shorten appointment times, make staffing changes, or eliminate services in order to remain financially viable.
 This would diminish access to essential health care services for patients. (FTI Consulting, 7/14/21)
- The negative impact of the public option on hospitals could also harm communities where racial and ethnic minority patients are overrepresented and often rely on hospitals for their health care. Many of the hospitals already at risk for closure serve predominantly minority communities who could be left without a health care provider, especially in southwestern United States. (FTI Consulting, 7/14/21)
- The hospitals most at risk under the public option admitted more children and non-Hispanic Asian or Pacific Islander patients as a share of total admissions than hospitals with lower ratios of private to total charges. (Urban Institute, 3/21)
- Relative to specialized Medicaid managed care plans that prioritize care coordination and address social determinants of health, the public option may not provide the coverage necessary to meet the unique health care needs of at-risk, low-income populations. (FTI Consulting, 7/14/21)
- Creating the **public option could cause "significant disruptions"** and **"result in only a modest decrease in the number of uninsured** compared to how many people would gain coverage through leveraging the public/private framework that exists under current law." (<u>KNG Health</u> <u>Consulting</u>, 3/12/19)
 - Overall, the public option could drastically alter the current health care market. It could drive an estimated 60 million people (40 percent of the market) out of employersponsored insurance which could potentially eliminate the entire private exchange market. (FTI Consulting, 5/21)
 - A public option would force up to two million Americans off their current coverage and leave eight million Americans without a private coverage option. (<u>FTI Consulting</u>, 11/19/19)

Medicare at 60

- Opening up Medicare to younger Americans through proposals like **"Medicare at 60"** could come with **higher costs, worse quality of care, and** a **large price tag.**
 - To finance Medicare at 60, Congress could pursue various tax increases. This includes raising the additional Medicare tax rate by 285 percent or raising the standard Hospital Insurance (HI) tax rate by up to 12 percent in 2022. (Lanhee J. Chen, Ph.D., Tom Church and Daniel L. Heil, 6/23/21)

- Enrolling in Medicare could result in high costs for 60-64-year-olds that could otherwise be avoided in the current health care system. (Lanhee J. Chen, Ph.D., Tom Church and Daniel L. Heil, 6/23/21)
- Nearly 70 percent of this group currently receive subsidies and could end up paying more after transitioning to Medicare, particularly those with incomes above 135 percent of the poverty line.
- New Medicare plans could have higher cost-sharing requirements and add increased costs to families that are split between Medicare and Marketplace plans.
- "Medicare at 60" could negatively affect hospitals and medical providers that are already financially strained by reducing the reimbursement rates they receive. These potentially unsustainable cuts could mean lower quality and less access to care for the current Medicare-eligible population. (Lanhee J. Chen, Ph.D., Tom Church and Daniel L. Heil, 6/23/21)
- Already, Medicare is the second-largest single line item in the federal budget, it will soon surpass Social Security and grow more quickly than every other component. Under "Medicare at 60," gross Medicare expenditures could rise by \$82.9 billion in 2022 and total Medicare spending could rise by \$995 billion over 10 years. (Lanhee J. Chen, Ph.D., Tom Church and Daniel L. Heil, 6/23/21)
- Overall, the federal deficit could rise by \$32.2 billion in 2022 and \$393.9 billion over the next 10 years (2022 to 2031). (Lanhee J. Chen, Ph.D., Tom Church and Daniel L. Heil, 6/23/21)
- Absent alternative financing mechanisms, the Hospital Insurance (HI) Trust Fund would be depleted in 2024, two years sooner than currently projected. (Lanhee J. Chen, Ph.D., Tom Church and Daniel L. Heil, 6/23/21)

Build on what's working in health care

- We could cover more Americans by making enhancements to current law permanent and expanding Medicaid in the 12 states which have not yet done so without the costs and negative consequences caused by creating the public option. (FTI Consulting, 5/21)
 - At present, Americans in the Medicaid coverage gap (2.2 million people) are defined as adults who live in states that have not expanded Medicaid whose incomes are above their state's eligibility for Medicaid but below the federal poverty line, the minimum income eligibility for tax credits through the health insurance marketplaces. (KFF, 1/21)
 - This disproportionately affects communities of color. Roughly 60 percent of the Americans who don't have access to Medicaid coverage are people of color. (<u>CBPP</u>, 6/21)
 - Enhancing the ACA and expanding Medicaid could improve access to quality care by covering more Americans. The combination of **continuing ARPA's enhancements and**

closing the Medicaid coverage gap could insure 7.5 million people in 2022. (<u>The</u> <u>Commonwealth Fund</u>, 3/22/21)

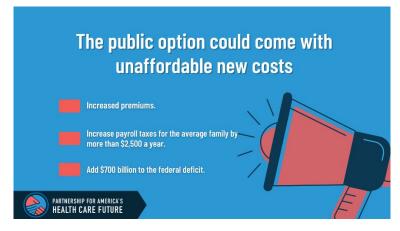

- The introduction of ACA enhancements combined with Medicaid expansion could decrease the U.S. uninsured rate by 2.1 percentage points. In contrast, creating the public option could threaten private coverage, driving 60 million people – or 40 percent of the market – out of employer-sponsored insurance (ESI) and potentially eliminating the private exchange market entirely. (FTI Consulting, 5/21)
- Implementing ACA enhancements and expanding Medicaid in the 12 non-expansion states could result in comparable coverage gains among vulnerable populations compared to the public option – and do so without threatening private coverage. (FTI Consulting, 5/21)
- Relative to specialized Medicaid managed care plans that prioritize care coordination and address social determinants of health, the public option may not provide the coverage necessary to meet the unique health care needs of at-risk, low-income populations. (FTI Consulting, 5/21)
- Improvements to current law are already helping to lower costs for Americans and making these enhancements permanent could improve affordability.
 - The number of individuals eligible for a subsidy to purchase Marketplace coverage has increased 20 percent from 18.1 million to 21.8 million. The majority of uninsured people (63 percent) are now eligible for financial assistance through the Marketplaces, Medicaid, or Basic Health Plans thanks to ARPA. (Kaiser Family Foundation, 3/25/21)
 - Most of the people eligible for these subsidies (84 percent) have incomes below 400 percent of the Federal Poverty Level (FPL), but now 11 percent of people have incomes between 400-600 percent of the FPL (up to an income of \$76,560 for a single individual or \$157,200 for a family of four). (Kaiser Family Foundation, 3/25/21)
 - Four out of 10 uninsured people are already eligible for a free or nearly free health care plan under existing law. (Kaiser Family Foundation, 3/25/21)
 - More than one million consumers now have health coverage that costs \$10 or less per month via the federal Health Insurance Marketplace. (Centers for Medicare and Medicaid Services, 6/14/21)
 - ARPA's expanded Premium Tax Credits have reduced monthly premiums for new enrollees by an average of 25 percent. Americans have been able to sign up for health insurance plans that have lower out-of-pocket maximums with the mean deductible for new consumers falling by nearly 90 percent. (Centers for Medicare & Medicaid Services, 5/6/21)
 - Improving our current health care system with reforms similar to ARPA could reduce net premiums by 24 percent on average and save consumers approximately \$10.6 billion annually. (<u>FTI Consulting</u>, 5/21)

- If these subsidies were made permanent, an additional 4.5 million individuals could gain health coverage and health care premiums nationally could fall by 15 percent. (<u>Urban Institute</u>, 4/14/21)
- Existing public and private programs are working together to expand access to affordable, high-quality health coverage and care. Enhancements to the Affordable Care Act in the past year have resulted in tremendous progress with regard to both access and affordability.
 - Since the ACA's introduction, adult uninsured rates and racial and ethnic coverage inequities declined in nearly every state, particularly in states that built on what's working by expanding Medicaid eligibility. (<u>The Commonwealth Fund</u>, 6/9/21)
 - Nearly 31 million Americans have enrolled in Affordable Care Act (ACA) Market plans as of early 2021. (<u>The Washington Post</u>, 6/5/21)
 - The Centers for Medicare & Medicaid Services (CMS) released new enrollment reports showing 2.8 million people have signed up for health coverage during the 2021 Special Enrollment Period (SEP). (<u>Department of Health and Human Services</u>, 09/15/21)
 - With the American Rescue Plan Act's (ARPA) expansion of Premium Tax Credit (PTC) subsidies, 63 percent of the entire uninsured population is now eligible for financial assistance to obtain coverage through the Health Care Marketplaces, a Basic Health Plan or Medicaid. (Kaiser Family Foundation, 3/25/21)
 - The current health care system has lowered adult uninsured rates and reduced racial and ethnic coverage inequities in almost every state over the past decade. (<u>The</u> <u>Commonwealth Fund</u>, 6/9/21)
 - 74 percent of Americans rate their health care coverage as "excellent" or "good." (<u>Gallup</u>, 12/14/20)
- The most effective way to expand access to affordable, high-quality health coverage and care is to **build on what's working in health care not to create a new, government-controlled health insurance system** such as the public option.

Sample Social Media

Why create an unaffordable new government health insurance system like the public option when millions of Americans would rather keep their current coverage? Take action and tell your legislator to oppose the public option: <u>https://bit.ly/3w7B5hC</u>

64 percent of Americans say lowering health care costs is a top priority. But lawmakers are introducing proposals like the public option that could raise costs. Take action and tell your lawmaker to oppose the public option: <u>https://bit.ly/3w7B5hC</u>

A public option could put our current health care system at risk by forcing millions of Americans off their current plans – all to potentially pay more and wait longer for worse care. Tell your lawmaker to oppose the public option: <u>https://bit.ly/3w7B5hC</u>

The proposed public option promises lower costs for patients, but research shows it could raise taxes and limit access to care. Building on our current system could lower costs and increase access. Let your legislator know you prefer to build on what's working: <u>https://bit.ly/3w7B5hC</u>

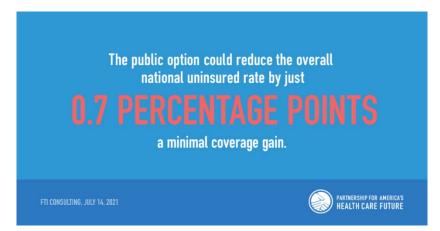

Proposals like Medicare at 60 and the public option claim they'll improve access to health care, but research shows they could actually reduce access to quality care – while increasing costs.. Tell your legislator to keep building on what's working in health care: <u>https://bit.ly/3w7B5hC</u>

Opening up Medicare to younger Americans could threaten quality of care for seniors. Tell your lawmaker to oppose harmful plans like Medicare at 60: <u>https://bit.ly/3w7B5hC</u>

How could Medicare at 60 affect you and your family? It could increase taxes and limit access to quality care. Click the link to take action and tell your lawmaker to oppose Medicare at 60: https://bit.ly/3w7B5hC

Research shows that enhancements to our current health care system could decrease the uninsured rate by 2.1 percentage points – all without creating a public option that comes with unaffordable new costs and complications. Learn more: <u>https://bit.ly/39PQDgV</u>

Building on our current health care system could reduce net premiums by 24 percent on average and save Americans approximately \$10.6 billion annually. Learn more: <u>https://bit.ly/39PQDgV</u>

Private plans and public programs working together have already helped 31 million Americans get health care coverage, and if we keep building on our current system, we could get upwards of 5 million more Americans insured. Join us as we keep building on what's working: https://bit.ly/3fWsmZN

DYK: Research shows the public option may not provide the coverage necessary to meet the unique health care needs of at-risk, low-income populations. Get the facts about the public option: https://bit.ly/3zZwD50

Sample Action Alert Email

SUBJECT: Tell Your Lawmaker to Oppose Creating a Public Option and Opening Up Medicare to Younger Americans

Right now, during budget reconciliation negotiations, lawmakers in Washington are considering health care reform proposals that could undo progress made under our current system. There have been various proposals to create a public option and open up Medicare to younger Americans.

These proposals may sound promising, but research shows that creating new government-controlled health insurance systems could have unintended costs and consequences.

- For instance, the public option could raise taxes on hardworking families and end up increasing coverage prices for Americans while decreasing quality of care. It could also force <u>millions of Americans</u> off their current health care plans.
- <u>Medicare at 60</u> which would open up Medicare to younger Americans could require tax increases, put seniors' access to care at risk, and bankrupt Medicare.

Private plans and public programs are already working together to increase access to affordable, high-quality health care. Just this year, over <u>2 million Americans</u> have signed up for coverage – adding to the <u>31 million+ Americans</u> who have gained coverage through our current system. Research shows that building on this progress will offer lower prices and increased coverage options.

 <u>Research</u> shows we could cover more Americans by making enhancements to current law permanent and expanding Medicaid in the 12 states which have not yet done so – without the unaffordable new costs and negative consequences caused by creating a public option.

We need your voice. Tell your legislator you oppose one-size-fits-all health care.
